Professional Summary

Full Stack Developer with experience building scalable web applications using **Java, Spring Boot, React.js, Node.js, and PostgreSQL/MongoDB**. Experienced in developing production-oriented REST APIs, authentication and authorization, database-driven systems, API optimization, and responsive frontend applications. Strong focus on backend architecture, performance, maintainability, and scalable design.

Skills

Languages: Java, C++, JavaScript, SQL

Frontend: React.js, HTML5, CSS3, Tailwind CSS, Redux

Backend: Spring Boot, Spring MVC, Spring Data JPA, Hibernate, Node.js, Express.js, REST APIs

Security: Spring Security, JWT Authentication, Role-Based Access Control, bcrypt

Databases: PostgreSQL, MongoDB

Database / Tools: Flyway, JPA, Hibernate, Git, GitHub, Postman, IntelliJ IDEA, VS Code

Experience

Full Stack Developer *Feb 2025 – Present*

Innovacx Hyderabad, India

Marketplace

- Developed Excel export functionality for order history using React.js and Node.js, enabling export of 1,000+ records per request and reducing manual reporting effort by 40%.
- Built a conditional order-routing workflow for internal and external users, automating factory and internal email triggers and improving operational efficiency by 35%.
- Implemented rollback logic for rejected internal orders to restore excess quantities and maintain PO integrity, reducing manual correction time by 50%.

Embelex

- Designed and implemented an Item Visibility Framework enabling admin-controlled customer and group-based product visibility rules.
- Built a Server-Sent Events (SSE) service to dynamically fetch allowed and blocked categories based on customer and organization data, reducing invalid product exposure by 30%.
- Engineered a Product Selector workflow using dynamic question-to-category mapping, improving product discovery and successful product selection completion by 30%.
- Implemented deep linking between product selection and customization workflows using shared container context, reducing user interaction steps by 40%.

Full Stack Developer Intern *Apr 2024 – Aug 2024*

Marvix Hyderabad, India

- Developed secure authentication and user management modules using React.js, Node.js, JWT, bcrypt, and Zod.
- Built and integrated a Shopify plugin with a React-based frontend and REST APIs for dynamic page management and product updates.
- Optimized frontend routing and reduced redundant API calls by 20% through efficient API integration strategies.

Projects

FinSight – Personal Finance & Financial Analytics Platform [GitHub]

Tech Stack: *Java 21, Spring Boot, Spring Security, JWT, Spring Data JPA, Hibernate, PostgreSQL, Flyway, React.js*

- Designed a production-oriented **personal finance platform** for tracking expenses, income, budgets, and planned-vs-actual spending trends.
- Implemented security using **Spring Security, JWT access/refresh tokens, password encoding, and role-based access control** with user-level data isolation.
- Built modular **REST APIs** in Spring Boot using DTO-based request/response models, Bean Validation, custom exception handling, transactional service boundaries, pagination, sorting, and dynamic **JPA Specifications**.
- Designed PostgreSQL persistence via **Spring Data JPA and Hibernate** with lazy loading, entity relationships, and version-controlled database migrations using **Flyway**.
- Engineered financial analytics using **database-side aggregation, JPQL projections, and GROUP BY queries** for category analysis and spending trends without entity loading overhead.
- Designed extensible architecture to support **recurring transactions, multi-currency, soft deletion, audit history, and receipt storage**.

Restaurant Reservation [GitHub]

Tech Stack: *React.js, Redux, Redux Saga, Node.js, Express.js, MongoDB*

- Built a full-stack restaurant reservation platform supporting restaurant discovery, table availability, reservation workflows, and booking confirmations.
- Designed RESTful APIs using Express.js and MongoDB for restaurant, table, availability, and reservation management.
- Implemented centralized state management using **Redux and Redux Saga** for asynchronous API workflows, reservation state, loading states, and error handling.
- Optimized frontend API communication and component rendering by reducing redundant requests, improving state reuse, and structuring reusable React components.

Education

Lords Institute of Engineering and Technology *June 2020 – July 2024*

Bachelor of Engineering in Computer Science Hyderabad, India
